

CARE AND MAINTENANCE SOLID PLASTIC PRODUCTS

Keeping your Solid Plastic compartments beautiful for years is easy...Here's how!
Scranton Products (Santana/Comtec/Capitol's) solid plastic compartments come closer to being totally maintenance free than any other toilet compartments on the market today. However, like a freshly painted room, new automobile, or any other product that is exposed to use and atmospheric conditions, the compartments will become soiled.

DIRT and GRAFFITI

Your **Scranton Products** (Santana/Comtec/Capitol's) solid plastic products can be cleaned satisfactorily by using water from an ordinary garden hose. If this does not do the job, we suggest:

1. Equip the garden hose with a pressure nozzle.
2. When the soiled areas are stubborn, the following cleaning solutions are suggested:
 - a. ½ cup of household detergent, 2/3 cup of trisodium phosphate, and 1 gallon of water
 - b. Any industrial strength cleaner (Non-abrasive)
 - c. For glue that sticks from the masking use Mineral spirits or Acetone (Just be careful on the hardware)

CUT and SCRATCHES

Repair cuts and scratches by burnishing the surface with a smooth round object, such as a spoon or screwdriver handle. Using the smooth round object, apply pressure to the cut or scratched surface and burnish with a blow dryer or heat gun, not against, the cut or scratch.

NOTE: Spray the surface of the panels and doors with silicone to give them a like new bright and glossy appearance.
